I feel that the project I did upgrade, was adequate to the requirements. I used accessible materials that were available without a license. I think that the site could be more interesting how were the available materials that can be oscillated and attached. I did researches on similar project around the internet, have been contacting and showing my work to closest of my relatives. Their first impression was very positive, they did not detect any flaws or errors in use.

In the project, shadows, colors, contrast, font and sizes has been changed, new buttons and highlights was added to facilitate work and finding on the page. A click on the logo, a new contact form, a search function, and a reaction to the purchase button, referring to the basket, have been added. Unfortunately, I was not able to complete the whole function of the basket, I had too little time. I felt sick for one week, and yet this work on the project and the purchase function turned out to be more than I thought. Unfortunately, we did not have such works and projects in school during classes and in I must say I regret very much, because I did not find enough materials to carry out and write this code from scratch, clearly and correctly. I hope we will do it anything like this soon, because I want to learn. It seems to me that this is more advanced code, I hope it is understandable and will not affect the evaluation of the project in which I tried to create the best conditions for the user experience.
